INTRODUCTION

The Index to Photographic Exploitation Products is a guide to the contents of reports and memoranda produced by means of photographic interpretation. These are added to the Exploitation Products Data File (EPF) of the National Base of Image-Derived Information (NBIDI) when received by the National Photographic Interpretation Center (NPIC). The index includes imagery interpretation reports produced by various components of the Army, Navy, Air Force, Central Intelligence Agency, Defense Intelligence Agency [redacted] as well as those produced by NPIC. At the request of the intelligence community, this publication is compiled and published monthly then cumulated annually by NPIC for the use of properly cleared components of USIB member organizations.

Listed documents are on file in NPIC, and microfiche copies are available to requesters when parent organizations are unable to provide copies. Information, such as bibliographies on specific subjects, is available from the EPF to answer requests which cannot be satisfied from the PEP.

Requests for regular distribution of the PEP, for additional information from the EPF, or for microfiche copies of documents should be channeled through appropriate liaison offices located in NPIC. Organizations which do not have a liaison office in NPIC should submit the request in writing to: Chief, Planning Staff/Program Analysis Branch.

GUIDE TO USERS

The PEP consists of four indexes:

Abstracts follow the bibliographic citations in the originator sequence.

- Subject in alphabetic sequence.
- Originator in report type/number sequence.
- General category with subject in alphabetic sequence.
- Geographic coordinate sequence. (Geographic coordinates are listed where a single area is involved.)

An accession number which should be used when requesting retention copies of documents from the microfiche file is assigned to each report.

THE IMAGE COMPARISON MICROSTEREOSCOPE (ICM) WAS TESTED AND EVALUATED AT NPIC BETWEEN AUGUST 1971 AND MAY 1972. ACCEPTANCE TESTS, OPERATIONAL EVALUATIONS, ENGINEERING EVALUATION, AND VIEWING MODE EVALUATION WERE CONDUCTED WITHIN THIS TIME PERIOD. THE INSTRUMENT PROVIDED ALL VIEWING MODES THAT WERE REQUIRED BY THE SPECIFICATION. THE OPTICAL SYSTEM PERFORMED WELL. THE INSTANCES IN WHICH THE ICM DID NOT MEET OPTICAL SPECIFICATIONS DID NOT APPEAR TO HAMPER THE USE OF THE INSTRUMENT BY PI'S IN THEIR EVALUATION OF ITS OPERATIONAL CAPABILITIES. SOME HUMAN-FACTOR DEFICIENCIES WERE NOTED WHICH WOULD BE CORRECTED IN FUTURE INSTRUMENTS. THE ICM EXHIBITED REASONABLE RELIABILITY AND PRESENTS NO PROBLEMS TO INTERNAL, ROUTINE MAINTENANCE WITH THE EXCEPTION OF DRIVE BELTS FOR SOME OF THE OPTICAL SWITCHES.
